

Mobile Care Monitoring Medication Templates

Medication Templates

Medication Templates provide a more efficient and less error prone way of setting up medication planned actions in MCM. A new section is available in Plan care day under the section "Medications". The blue icons are used to set up templated medication, PRN, creams and insulin templates.

Complete the details of the medication as per the prescription. Change the Action label and Full name to be the name of the medication. Instructions for administration would be details such as "Take ONE daily after food". Tick the 'Self-administered' box if you are a recording details of medication that the resident manages themselves.

PERSON

In the Care App planned medications will show like any other planned action and can be evidenced just like any other planned action, by tapping on them

To evidence PRN medication, go to Adhoc and scroll down to PRN medication and tap on it

In here you'll see any PRN medication that we've added in Plan Care Day, choose whichever one you've given

From there evidence as you normally would, tapping on sliders and adding more detail if needed
